Omnitracs Roadnet Anywhere Routing + Dispatching

Auto Part Supply Industry Solutions

Grow your business while remaining customer-centric and profitable with Omnitracs' powerful routing and dispatching technology.

Customer Service Running at Full Speed

Success is not just linked to cost savings. Building relationships with customers and providing them with the best service possible is just as important. Omnitracs Roadnet Anywhere helps create a balance. Using this tool, you can:

- Gain real-time visibility and answer "Where's my truck?" calls in seconds
- Know immediately when an order has been delivered
- Adjust routes based on customer-preferred service windows

Efficiency and Accuracy at Every Turn

The challenge is to grow your business without necessarily adding more vehicles and drivers — or the time it takes to complete each route. Omnitracs gives you the tools you need to create the most efficient and accurate routes possible. With them, you can:

- Know the precise impact of each move from the route scoreboard
- Check that route plans adhere to commercial road restrictions
- Ensure accurate delivery locations by cross referencing satellite views with an interactive geocoding feature
- Account for pre- and post-trip time, breaks, waits, and layovers
- Make daily routing fast and easy with route pass templates

Agility and Speed to Stay in the Game

Orders come in almost constantly, and sometimes a second wave of orders comes in even after last-minute additions to routes. Unplanned events — accidents, flat tires, or breakdowns — also cause last-minute route changes. With pressure from insurance companies and car owners who want their vehicles back now, agility and speed are key for suppliers to stay competitive. Our dispatching solutions can help you:

- Locate your vehicles and drivers in real time
- Manage last-minute or manual orders with our powerful 'suggest route' algorithm
- Edit delivery sequences with easy drag and drop functionality
- Incorporate pickups into routes in real time

Greater Visibility = Greater Accountability

Even when we take the time to plan out every last detail, the plan will fall apart if no one can be held accountable. By using Roadnet Anywhere Routing and Dispatching, you can compare the plan to what really happened on the road. With our reporting capabilities, you can:

- Identify trouble delivery spots and driver variances with actual vs. planned reporting
- Coach drivers that run extra miles and make unplanned stops — using real data
- Monitor undesirable driver behavior: speeding, stopping too long, or being out of contact with the office

Omnitracs' powerful routing + dispatching solutions can help your fleet be more efficient, profitable, and customer-centric. Learn more at www.omnitracs.com/solutions/planning-delivery.
